

# CASE STUDY

## About the Client

The client is a global services company that helps clients transform in the areas of business, marketing, and technology. The company operates three divisions that enable clients to gain a competitive advantage and succeed in an increasingly digital world.

## Solution

Wheebox understood and designed a platform keeping in mind the designing of landing page, assessments, analytics as per the requirements of the client.

Wheebox developed a new platform altogether for Selenium Hands-On exercise. Working on Hands-On exercises and evaluation on the basis of test cases, as per clients requirement, was a learning for both the teams (client and Wheebox team)

Segregating the tests with different domain names as per the levels of questions for MCQs and Hands-on exercises made easy for the recruiters to assign the assessment to candidates and easy access to results and reports at one place.

Successfully conducted 3000+ assessments in one quarter.

## Assessment Center

The organisation conducted appraisal programmes for employees working in various technical departments (Quality testing engineers) across all levels using old methodology.

They wished to switch to online assessments for appraisals of all the technology department employees involved in testing. The number of employees were approximately 3000+. Post going online, assessment were conducted at all locations across the country at the same time and results were available at one place. Just a filter away and department heads/recruiters are able to see the results of the candidates for their locations.

**1. Multiple Choice assessments-** Technical domains such as API, Agile, BDD, TDD, Appium, Cucumber, Design Principles, Database, Java, Javascript, Ruby, Python, Selenium etc with three difficulty levels- easy, medium and difficult to assess employees at various levels within the organisation.

**2. Hands-** On assessments for various domains- Coding assessments for domains such as API, Selenium, Java, Javascript, Ruby, Python, Appium, Cucumber. Here the candidates used Wheebox platform for testing the codes written in different languages using compilers which helped recruiters access their practical skills.

3. Recruiters can see real time results. Every quarter they planned to run assessments.

4. Admin has access to all the results, create assessments, register candidates etc.
